EDITORIAL NOTICE

Contributors of perturbed orbital elements are advised that use of the Epoch
2000 Sept. 13.0 TT (rather than 2000 Feb. 26.0 TT) will become effective *after* the
next batch of *MPCs*.

NEW OBSERVATORY CODES

The following listing is a continuation to that on *MPC* 38950. The longitudes λ
are measured in degrees eastward from Greenwich, and the parallax constants $\rho \cos \phi'$
and $\rho \sin \phi'$ are the product of the geocentric distance (in earth equatorial radii) and
the cosine and sine, respectively, of the geocentric latitude.

OBSERVATIONS OF MINOR PLANETS

The summary lists, for each observatory code, the designation of each object observed (an asterisk signifying a new discovery), with three numbers indicating the number of observations, the number of different nights on which the object was observed and the arc (in days) covered by the observations; at the end of each observatory listing there is a count of the total number of observations, of the number of objects and of the number of discoveries followed by an asterisk, together with the total range of dates covered by the observations.
