EDITORIAL NOTICE

S. M. Larson, on behalf of the Catalina Sky Survey, informs us of a timing problem that has affected their astrometry since the project's inception. The reported times of observation require a correction of +12 seconds.

E. Bowell, on behalf of the Lowell Observatory Near-Earth Object Search, informs us of a timing problem that affected their astrometry during the period 2000 March 1-May 17, inclusive. The reported times of observation require correction by +22.5 seconds.

The Minor Planet Center does not intend to republish in the *MPCs* the corrected CSS and LONEOS observations referred to above. The times of observation in our archive have been modified. This change affects 153762 CSS observations and 96560 LONEOS observations. The observations appearing in this batch of *MPCs* have the correct times.

NEW OBSERVATORY CODE

The following listing is a continuation to that on *MPC* 40575. The longitude λ is measured in degrees eastward from Greenwich, and the parallax constants $\rho \cos \phi'$ and $\rho \sin \phi'$ are the product of the geocentric distance (in earth equatorial radii) and the cosine and sine, respectively, of the geocentric latitude.

OBSERVATIONS OF MINOR PLANETS

The summary lists, for each observatory code, the designation of each object observed (an asterisk signifying a new discovery), with three numbers indicating the number of observations, the number of different nights on which the object was observed and the arc (in days) covered by the observations; at the end of each observatory listing there is a count of the total number of observations, of the number of objects and of the number of discoveries followed by an asterisk, together with the total range of dates covered by the observations.

SUMMARY OF NEW NUMBERINGS

The following summary of new numberings of minor planets lists for each object the number, principal provisional designation, date of discovery, observatory code of the discovery site and the names of the discoverers. A separate table lists orbital elements and absolute magnitudes (the slope parameter *G* being 0.15 in every case). Further details, including additional identifications and residuals, are given in the *Minor Planet Circulars Orbit Supplement*.
