EDITORIAL NOTICE

The terrible events three weeks ago today have prompted several correspondents to propose that minor planets be named to honor the victims. Deeply sympathetic to this desire, but as an independent action, the IAU Committee for Small-Body Nomenclature has unanimously agreed to name three minor planets for concepts that represent some of the most basic and universal human values. The resulting names and citations, on *MPC* 43684, for the consecutively numbered minor planets (8990), (8991) and (8992), which were discovered at observatories on three continents, are intended as a positive statement abhorring the tragedy that occurred on a fourth. The 13 members of the CSBN represent the United States, the European Union, China, Russia, Japan, Norway, the Czech Republic, Uruguay and New Zealand.

After the usual doldrums of the northern-hemisphere summer, September traditionally brings an increase in both observational activity and the concomitant orbital calculations. This past month has been no exception, with new records of more than 720 000 published observations and almost 15 000 new designations issued. There are also a record 30 000 orbit calculations, of which 18 000 involve observations at multiple oppositions and include a record 1642 new numberings—bringing the total number of numbered minor planets to (30716). Including also the “midmonth” observations *Supplement* on Sept. 16, the total number of pages in the *MPCs* and its observation and orbit supplements this month is a record 6068.

Following the notice on *MPC* 42955 and as required by the contract between the MPC and the IAU, single-night detections of unidentified minor planets are being made available for anonymous login on the computer cfa-ftp.harvard.edu in the directory `/data/ftp/pub/ONS` in cases where the observers have stated that they wish to avail themselves of this service, and when the observations are at least six months old. As was previously remarked, these observations are unverified, and the MPC bears no responsibility for their accuracy or reliability. The MPC will not enter into discussions involving any of these observations, except under the specific terms mentioned in the *README.TXT* file.

The following listing is a continuation to that on *MPC* 43237. The longitude λ is measured in degrees eastward from Greenwich, and the parallax constants $\rho \cos \phi'$ and $\rho \sin \phi'$ are the product of the geocentric distance (in earth equatorial radii) and the cosine and sine, respectively, of the geocentric latitude.

OBSERVATIONS OF MINOR PLANETS

The summary lists, for each observatory code, the designation of each object observed (an asterisk signifying a new discovery), with three numbers indicating the number of observations, the number of different nights on which the object was observed and the arc (in days) covered by the observations; at the end of each observatory listing there is a count of the total number of observations, of the number of objects and of the number of discoveries followed by an asterisk, together with the total range of dates covered by the observations.

SUMMARY OF NEW NUMBERINGS

The following summary of new numberings of minor planets lists for each object the number, principal provisional designation, date of discovery, observatory code of the discovery site and the names of the discoverers. A separate table lists orbital

elements and absolute magnitudes (the slope parameter G being 0.15 in every case). Further details, including additional identifications and residuals, are given in the *Minor Planet Circulars Orbit Supplement*.
