EDITORIAL NOTICE

The Minor Planet Center acknowledges with thanks the receipt of donations this past month from A. C. Beresford (South Australia) and P. A. Shugart (Texas).

As noted on *MPC* 44163, the acceptance and publication of new names for minor planets continues to be more delayed than in the past. Nevertheless, all names submitted before today are now in the hands of the Committee on Small-Body Nomenclature. As also noted, there are plans for the preparation of a website, the use of which will be mandatory for the submission of name proposals, but the preparation of which has also been delayed. In the mean time, and effective immediately, submitters are advised that name proposals that are not sent by e-mail *precisely* according to specification, or that appear to be too long, will be rejected. Submissions by e-mail to mpc@cfa.harvard.edu will be automatically acknowledged, but there will be no notification of rejection. It is therefore important that all those submitting names familiarize themselves with the instructions in the "Guide to Minor Body Astrometry" <http://cfa-www.harvard.edu/iau/info/Astrometry.html>, referring specifically to question 29. Citations should not be sent as an attachment, the spacing is important, the provisional designation and discovery date should be provided in the proper form, and the header line must be included. Diacritical marks should be indicated according to the conventions of TeX, and for names honoring people the years of birth (and death) and some geographical information should be included. Recent discussions in the CSBN have led to suggestions that contrived or concatenated names (e.g., consisting of elements of the first and last names of persons to be honored) should be confined to no more than 12 letters, if at all possible, and that the acknowledgment of others, such as a person suggesting a name to or preparing the citation for the discoverer, should be kept to a minimum.

NEW OBSERVATORY CODES

The following listing is a continuation to that on *MPC* 44251. The longitudes λ are measured in degrees eastward from Greenwich, and the parallax constants $\rho \cos \phi'$ and $\rho \sin \phi'$ are the product of the geocentric distance (in earth equatorial radii) and the cosine and sine, respectively, of the geocentric latitude.

OBSERVATIONS OF MINOR PLANETS

The summary lists, for each observatory code, the designation of each object observed (an asterisk signifying a new discovery), with three numbers indicating the number of observations, the number of different nights on which the object was observed and the arc (in days) covered by the observations; at the end of each observatory listing there is a count of the total number of observations, of the number of objects and of the number of discoveries followed by an asterisk, together with the total range of dates covered by the observations.

SUMMARY OF NEW NUMBERINGS

The following summary of new numberings of minor planets lists for each object the number, principal provisional designation, date of discovery, observatory code of the discovery site and the names of the discoverers. A separate table lists orbital elements and absolute magnitudes (the slope parameter G being 0.15 in every case). Further details, including additional identifications and residuals, are given in the *Minor Planet Circulars Orbit Supplement*.
