EDITORIAL NOTICE

A new edition—the fifth—of the *Dictionary of Minor Planet Names* has just been published by Springer-Verlag (Berlin-Heidelberg-New York). Edited, as in the past, by L. D. Schmadel (Astronomisches Rechen-Institut, Heidelberg), the 2003 edition contains xvi + 992 pages (and five illustrations). The ISBN number is 3-540-00238-3, and the recommended retail price of the hard-cover book is €149.95 (or \$169.00). *DMPN V* was prepared on behalf of IAU Commission 20. According to a resolution of IAU Division III at the General Assembly in Manchester in 2000 this publication attained the status of an official IAU reference work. It contains discovery and naming information for all 10 038 minor planets that were named through Nov. 2002. This fifth edition will now remain the primary reference, with the idea that supplements with newly named bodies will be issued every three years (correlated with the IAU General Assemblies).

Owing to staff absences, in particular in connection with the upcoming IAU General Assembly in Sydney, the July and August batches of *Minor Planet Circulars* will be replaced by a single “mini-batch” of *Circulars* to be issued on or about Aug. 1. Nevertheless, it is hoped that several “mid-month” batches of the observations *Supplement* will be issued before the next full batch of *Minor Planet Circulars* in mid-September.

The 1998 Aug. 19 observations from the Sloan Digital Sky Survey (SDSS) that were reported some years ago and that have subsequently appeared in the *MPCs* were erroneously published in the TAI timescale. A much larger set of observations from SDSS, including remeasures from the previously-reported night, is now available. Rather than attempting to publish corrections to the previously-published SDSS astrometry, the Minor Planet Center is simply deleting the 1049 affected observations from its files.

NEW OBSERVATORY CODES

The following listing is a continuation to that on *MPC* 48317. The longitudes λ are measured in degrees eastward from Greenwich, and the parallax constants $\rho \cos \phi'$ and $\rho \sin \phi'$ are the product of the geocentric distance (in earth equatorial radii) and the cosine and sine, respectively, of the geocentric latitude.

OBSERVATIONS OF MINOR PLANETS

The summary lists, for each observatory code, the designation of each object observed (an asterisk signifying a new discovery), with three numbers indicating the number of observations, the number of different nights on which the object was observed and the arc (in days) covered by the observations; at the end of each observatory listing there is a count of the total number of observations, of the number of objects and of the number of discoveries followed by an asterisk, together with the total range of dates covered by the observations.
