EDITORIAL NOTICE

Subscribers are advised that the June and July *Minor Planet Circulars* will be issued several days after full moon and will consist of minibatches. It is expected that the next full batch of *MPCs* will be issued at the time of full moon in August.

We wish to draw attention again to the resolutions adopted by the IAU Committee on Small Body Nomenclature at the IAU General Assembly in Sydney last July and published on *MPC* 49221:

(1) The CSBN recognizes the need to limit the number of minor planets named and requests individual discoverers and teams to propose no more than two names each two months (i.e., to correspond to the timescale generally adopted for the publication of new names in the *MPCs*).

(2) Names honoring persons, companies or products for no more than success in business are discouraged. Names or citations that resemble advertising will not be accepted.

While most proposers of names have graciously cooperated with these requests, a few have not. In the more egregious cases the CSBN will therefore be forced to accept only the first two proposals in each batch. It will not retain the rejected names for future consideration, and if proposers wish to have such reconsideration, they will have to resubmit the names. Discoverers are reminded that, just because more than 80 000 minor planets have been numbered, that is not an invitation indiscriminately to provide names for large numbers of them. It is far better to concentrate on having a small number of meaningful names having broad international appeal.

Every care is taken to ensure that the header information concerning the various observing programs is published correctly in the *MPCs*. As a first approximation, the header files are compiled automatically from the information provided by observers with their submissions of observations. The success of this automation requires these submissions to be submitted consistently, following the accepted style, and the cooperation of those making the submissions is requested. If the names of observers are sometimes submitted with one initial and at other times with additional initials, or if telescopes are sometimes specified with *f* ratios and at other times not, inappropriate partial duplication of the entries can occur.

NEW OBSERVATORY CODES

The following listing is a continuation to that on *MPC* 51329. The longitudes λ are measured in degrees eastward from Greenwich, and the parallax constants $\rho \cos \phi'$ and $\rho \sin \phi'$ are the product of the geocentric distance (in earth equatorial radii) and the cosine and sine, respectively, of the geocentric latitude.

OBSERVATIONS OF MINOR PLANETS

The summary lists, for each observatory code, the designation of each object observed (an asterisk signifying a new discovery), with three numbers indicating the number of observations, the number of different nights on which the object was observed and the arc (in days) covered by the observations; at the end of each observatory listing there is a count of the total number of observations, of the number of objects and of the number of discoveries followed by an asterisk, together with the total range of dates covered by the observations.
