EDITORIAL NOTICE

At the IAU General Assembly in Prague on Aug. 24 a very substantial majority of the members present agreed to accept that the solar system contains just eight “planets” (Mercury–Neptune) and that objects in hydrostatic equilibrium orbiting the sun but not dominating their vicinity would be considered as “dwarf planets”. (1) Ceres, Pluto and 2003 UB₃₁₃ were identified as members of this new category, with other objects such as 2003 EL₆₁ and 2005 FY₉ likely to be added in the future. Since at least one of the “dwarf planets” is already included in the catalogue of numbered “minor planets”—with comets and other natural sun-orbiting material a component of a new category of “small solar-system bodies”—and since the Minor Planet Center Terms of Reference emphasize the need for the MPC to maintain a database of the astrometric observations of such bodies observed beyond the confines of the earth’s atmosphere, Pluto and the above-mentioned three provisionally designated objects are now being added to this list of objects with reliable orbit determinations under the numbers (134340), (136199), (136108) and (136472), respectively. It should be noted that, just as some of the numbered objects that have exhibited cometary activity also have designations in the catalogue of numbered periodic comets, the numbering of “dwarf planets” does not preclude their having dual designations in possible separate catalogues of such bodies.

NEW OBSERVATORY CODES

The following listing is a continuation to that on MPC 57382. The longitudes λ are measured in degrees eastward from Greenwich, and the parallax constants $\rho \cos \phi'$ and $\rho \sin \phi'$ are the product of the geocentric distance (in earth equatorial radii) and the cosine and sine, respectively, of the geocentric latitude.

SUMMARY OF NEW NUMBERINGS

The following summary of new numberings of minor planets lists for each object the number, principal provisional designation, date of discovery, observatory code of the discovery site and the names of the discoverers. A separate table lists orbital elements and absolute magnitudes (the slope parameter *G* being 0.15 in every case). Further details, including additional identifications and residuals, are given in the *Minor Planet Circulars Orbit Supplement*.
