EDITORIAL NOTICE

The listing of new names and citations for minor planets on *MPC* 57795–57800 includes the assignment of names for the “dwarf planet” (136199) 2003 UB₃₁₃ and its satellite. Following a decision by IAU Division III at its recent meetings, these names were approved jointly by the Committee on Small-Body Nomenclature and the Working Group on Planetary-System Nomenclature. The names were published on *IAUC* 8747, but this is the first appearance of the citations.

NEW OBSERVATORY CODES

The following listing is a continuation to that on *MPC* 57525. The longitudes λ are measured in degrees eastward from Greenwich, and the parallax constants $\rho \cos \phi'$ and $\rho \sin \phi'$ are the product of the geocentric distance (in earth equatorial radii) and the cosine and sine, respectively, of the geocentric latitude.

(136199) Eris = 2003 UB₃₁₃

Discovered 2003 Oct. 21 by M. E. Brown, C. A. Trujillo and D. Rabinowitz at Palomar.

Eris is the Greek goddess of discord and strife. She stirs up jealousy and envy to cause fighting and anger among men. At the wedding of Peleus and Thetis all the gods were invited with the exception of Eris, and, enraged at her exclusion, she spitefully caused a quarrel among the goddesses that led to the Trojan war. The satellite (136199) Eris I, discovered 2005 Sept. 10 by M. E. Brown and the Keck adaptive optics team at Mauna Kea, is named Dysnomia, for the Daimon spirit of lawlessness. Dysnomia is the daughter of Eris, goddess of chaos and strife, and the counterpart to Eunomia, who puts an end to the anger of grievous strife.
